

SAP Cloud Application Services deployed at SAP National Security Services

SAP® CLOUD APPLICATION SERVICES (CAS) THROUGH SAP NS2: SIMPLIFYING THE END-TO-END MANAGEMENT OF CLOUD SYSTEMS FROM SAP

What if you could spend less time managing your technology and spend more time doing what you do best? With SAP Cloud Application Services (CAS) through SAP NS2, you can. We help you simplify the end-to-end management of cloud systems from SAP by supporting application operations and adoption.

Time-consuming tasks like performance testing, security updates, regression testing, upgrades, and monitoring are all part of our outcome-based CAS packages. With straightforward terms and fixed rates, you can customize your CAS packages according to your specific security and compliance needs. And our local support model keeps your cloud operations and data in country to maximize data sovereignty and comply with data access and data residency requirements. SAP NS2 can help you free up time and resources and boost the efficiency of your cloud and IT operations.

About SAP Cloud Application Services (CAS) offerings

SAP Cloud Application Services (CAS) offerings let you focus on what you do best, while we run and manage SAP S/4HANA Cloud and secure cloud solutions from SAP. Following a successful cloud deployment, our services create a stable foundation for your processes in the cloud. Our experts support your specific applications and business processes to help you innovate and improve your SAP-centric application landscapes. SAP Cloud Application Services are focused on outcomes and help keep your SAP solutions up to date, secure, and stable.
