

SAP NS2 Solution Brief | PUBLIC
Human Experience Management | SAP SuccessFactors

SAP SuccessFactors delivered through an enhanced security model

SAP National Security Services

SAP National Security Services (SAP NS2) was founded to help protect and secure the mission critical operations of highly regulated organizations. As the U.S. cloud service provider of SAP, we provide the unique capability for regulated industries, government agencies, and defense departments to run market leading SAP applications without having to sacrifice security, innovation, or cost. Our team of local, credentialed experts provide the highest levels of security and compliance, deliver world class innovation, and protect critical data across all applications enterprise-wide.

Secure, compliant cloud technologies can transform how you operate within your industry. SAP NS2 **delivers the power of SAP's intelligent enterprise** with secure cloud solutions built to maximize data sovereignty and secure workloads.

Barriers to a secure, modern, and successful workforce for regulated organizations

In today's cloud computing world, organizations must stay one step ahead to defend their systems while continuing to provide their employees with comprehensive human resource (HR) and experience management support. The keys considerations are:

A secure workstream for your employees.

Employee records contain confidential information, such as date of birth, tax identification numbers, health information, and more. In the regulated space, employees hold special clearances and handle classified operations. Organizations need to ensure their HR solution is compliant with their local laws and regulations and maintained and managed by resources who remain in-region.

Harboring long-term talent. In the regulated space, employees often handle information that concerns national security and defense. It is paramount their employees seek long-term careers, because when individuals are constantly rotating in and out, information can quickly leak and put an organization at risk. Organizations need a comprehensive HR solution that allows their employees to feel connected, supported, and empowered.

Why SAP National Security Services: Secure. Local. Sovereign.

Understanding SAP SuccessFactors deployed through SAP NS2

At SAP NS2, we know that innovation fails without security. Human experience management is a key requirement for organizations, as it helps employees understand their personal career goals, develop new skill sets, and shapes the overall culture of a company. But without the right security parameters, regulated industries are bound to on-premise infrastructure.

Through our sovereign cloud deployment model, we secure and control how SAP SuccessFactors is

governed, where it resides, and how its data is protected. SAP SuccessFactors Human Experience Management (HXM) through SAP NS2 gives regulated industries the ability to benefit from a comprehensive HXM solution while remaining protected under their unique security requirements. Through stringent security practices that provide data privacy, data residency and cloud sovereignty, organizations can be assured their employees' data is protected according to their standards and doesn't fall into the hands of international adversaries.

Put your people at the center with the power of SAP NS2's secure cloud deployment

Why SAP National Security Services: Secure. Local. Sovereign.

Why SAP National Security Services: Secure. Local. Sovereign.

SAP NS2 understands the value of complying to local data sovereignty regulations, storing data locally, and controlling who can access data based on regional requirements.

The innovation, functionality, and services of SAP SuccessFactors meet the same standards as SAP Commercial, but SAP NS2's offering brings extended value regarding how the solution is protected and managed.

- We leverage tools such as vulnerability scanning, intrusion detection, and continuous monitoring to ensure your data stays protected under an automated security model.
- Dedicated, local, and credentialed SAP NS2 resources support your landscape through deep industry and regional compliance knowledge.
- Our offering mitigates the risk of external threats by limiting system management, providing in-country deployment, and leveraging an enterprise strategy to control the data and resource access within your region.
